

# three-way protection against *Lepidoptera*

## highly active

Triple mode of action guarantees effective and long-lasting activity with less applications, which saves time and money

ovicidal activity  
prevents eggs from hatching

influences ability to  
reproduce  
females lay sterile eggs  
preventing a next generation

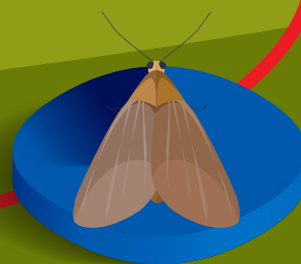

larvicidal activity  
interferes with the moulting  
process

## reliable

Effective irrespective of the weather and will also control individuals resistant to organophosphates, carbamates and pyrethroids

## selective

SORBA works mostly by ingestion and is therefore safe to beneficial insects
