1. WARNINGS

- Handle with care.
- Poisonous if swallowed.
- Store in a cool place.
- Store away from food and feed.
- Keep out of reach of children, uninformed persons and animals.

Do not feed seed treated with CONCEP 960 EC to livestock.

IN CASE OF POISONING, CALL A DOCTOR AND MAKE THIS LABEL AVAILABLE TO HIM.

Although this remedy has been extensively tested under a large variety of conditions, the registration holder does not guarantee that it will be effective under all conditions. The activity and effect thereof may be affected by factors such as abnormal soil, climatic and storage conditions, quality of dilution water, compatibility with other substances not indicated on the label as well as by the method, time and accuracy of application. The registration holder furthermore does not accept responsibility for damage to crops, vegetation, the environment or harm to man or animal, or for lack of performance of the remedy concerned due to failure by the user to follow the label instructions, or to the occurrence of conditions which could not have been foreseen in terms of the registration. Consult the supplier in the event of any uncertainty.

2. PRECAUTIONS

- Avoid contact with skin and eyes, and inhalation of fumes.
- Wash with soap and water after use.
- Wash contaminated clothing after use.
- Do not eat, drink or smoke whilst mixing or applying the product or before washing hands and face.
- Clean applicator after use. Dispose of rinsate where it will not contaminate crops, grazing, rivers, dams and boreholes.
- Prevent contamination of food, feed, drinking water and eating utensils.
- Rinse the empty container three times with a volume of clean water equal to a minimum of 10 % of the container. Add the rinsate to the content of the spray tank before destroying the container.
- Destroy empty container and do not use it for any other purpose.

SYMPTOMS OF HUMAN POISONING:

Irritation to eyes, skin or respiratory tract.

FIRST AID TREATMENT:

Move victim from contaminated area to fresh air.

Ingestion: if patient is fully conscious, immediately administer 1 or 2 glasses of water to drink and induce vomiting. Never give anything by mouth to an unconscious person.

Eye contact: hold the eyelids apart to rinse the entire surface of the eye and lids. Do not apply any medicating agent except on the advice of a physician.

Skin contact: wash with plenty of soap and water, including hair and fingernails. Do not apply any medicating agent except on the advice of a physician. Remove clothing and wash before re-use. Apply artificial respiration if necessary.

NOTE TO PHYSICIAN:

No specific antidote is known if ingested. Induce emesis or lavage stomach. Treat symptomatically. Based on the acute oral LD50 in rats, ingestion of 2 tablespoons of more may be fatal to an adult human. Medical conditions likely to be aggravated by exposure: persons with allergy history or pre-existing dermatitis should use extra care in handling this product due to the presence of a small amount of 2-bromomethyl-1,3-dioxolane.

3. USE RESTRICTIONS

- Do not use CONCEP 960 EC on poor quality seed.

GENERAL INFORMATION

CONCEP 960 EC is a seed treatment material which protects grain sorghum against the phytotoxic effects of DUAL GOLD (L5749) or METAGAN GOLD (L5748).

Without a CONCEP 960 EC seed treatment, DUAL GOLD or METAGAN GOLD (S-metolachlor) will cause severe injury to grain sorghum. CONCEP 960 EC will not adequately protect sudan grass, sorghum-sudan crosses or crops other than grain sorghum from the effects of DUAL GOLD or METAGAN GOLD.

4. DIRECTIONS FOR USE

Use only as directed

CONCEP 960 EC is applied at 15 m/l/50 kg seed. A seed treatment solution is made by adding water to 15 m/l of CONCEP 960 EC to a 250 m/l volume.

A concrete mixer or off-centre drum with a capacity of 150 - 200 l is suitable for the treatment of 50 kg seed.

The efficacy of the treatment may be adversely affected if the concrete mixer or off-centre drum used, is filled to more than half its capacity with seed.

5. SEED TREATMENT

1) Concrete Mixer

CONCEP 960 EC may be applied to the seed by means of a clean concrete mixer. The inside of the mixer must first be equilibrated by wetting it thoroughly with 250 m/l of the seed treatment solution prior to the first bag of seed being treated.

Load 50 kg of seed into the mixer and distribute 250 m/l of the
seed treatment solution evenly over the seed during rotation. Continue rotation for 2 minutes until all the seed is uniformly moist. If the treatment is visually not uniform after 2 minutes, rotation must continue in order to obtain uniformity. Seed should **first** be treated with **CONCEP® 960 EC**, allowed to dry before being treated with a fungicide / insecticide.

2) Off-centre drum

A concrete mixer should preferably be used to treat the seed. If a concrete mixer is, however, not available, an off-centre drum could be used. First equilibrate the inside of the drum by wetting it thoroughly with 250 ml of the seed treatment solution prior to the first bag of seed being treated.

Load 50 kg of seed into the drum and distribute 250 ml of the seed treatment solution evenly over the seed. Rotate the drum at a constant speed for at least 3 minutes until all the seed is uniformly moist. If the treatment is visually not uniform after 3 minutes, rotation must continue in order to obtain uniformity. Seed should **first** be treated with **CONCEP® 960 EC**, allowed to dry before being treated with a fungicide / insecticide.

**CONCEP 960 EC** treated seed may be planted immediately provided it has dried off after treatment. Treated seed may be carried over and planted the season following treatment. Adequate protection against DUAL GOLD or METAGAN GOLD will still be obtained. **CONCEP 960 EC** treated seed carried over from one season to the next should not be retreated with **CONCEP 960 EC**.

- Refer to the DUAL GOLD or METAGAN GOLD labels for directions for use on grain sorghum.
- Consult the various Fungicide and Insecticide seed treatment labels for mixing, rates and carry-over seed.
